

## 1.1 Usage

`\todo` My most common usage of the todonotes package, is to insert an todonotes somewhere in a latex document. An example of this usage is the command

`\todo{Make a cake \ldots},`

Make a cake ...

which renders like. The `\todo` command has this structure: `\todo[\langle options \rangle]{\langle todo text \rangle}`. The `todo text` is the text that will be shown in the todonote and in the list of todos. The optional argument `options`, allows the user to customize the appearance of the inserted todonotes. For a description of all the options see section 1.3.

`\missingfigure`

The `\missingfigure` command inserts an image containing an attention sign and the given text. The command takes only one argument `\missingfigure{\langle text \rangle}`, a text string that could describe what the figure should consist of. An example of its usage could be

`\missingfigure{Make a sketch of the structure of a trebuchet.}`

which renders like.
